● CAUSE OF RIVER BANK EROSION :-

● Floods are one of the main causes of bank erosion. Every year in this region due to excess rainfall during monsoon, the water level of the rivers rises and overflows the banks resulting in the floods. And floods are indirectly responsible for river erosion.

● And also, river banks are being breached to unscientifically lift additional soil from both sides of the river.

FINDINGS :-

- A long time ago, the embankment was built with stones. No further action was taken after that.
- Some parts of the banks of the river are eroded and hanging. This can lead to accidents.
- As a result of the erosion of the river banks, the area of land on both sides of the river is gradually decreasing. As a result, the amount of cultivation land is decreasing. As a result crop production is gradually decreasing.
- The course of the river is changing due to the erosion of the river bank. As a result, the lands along the river are sinking into the river during monsoon.
- This river used to flood 30 years ago. As a result many houses were damaged and even many people died during that time.
